

ACCESS DESIGN CAPACITY

Overview

Bright Group

We are an Australian-owned specialist provider of multi-disciplinary trade services supporting shutdowns, maintenance, projects, and ongoing operations. We prioritise data-driven decision-making, responsive execution, and the continuous development of our people.

Since our founding in 2007, we have grown from a small team focused on access services into a comprehensive, end-to-end service provider. Today, we offer a wide range of capabilities, including scaffolding, rope access, mechanical, electrical, design, and training.

What sets us apart is our ability to manage projects of any size or complexity while maintaining the highest standards of quality, safety, and reliability. Our clients value us not just for completing the work, but for delivering it right, every time.

Consortium of Companies:

Services:

- Electrical & Instrumentation
- Rope Access
- Scaffolding
- Structural, Mechanical and Piping

The way we work

Safety

Safety is at the core of who we are. The health, safety, and well-being of our people, partners, and communities guide every decision we make. We foster a culture of accountability, integrity, and respect – ensuring everyone goes home safe, every day.

Diversity & Inclusion

Diversity strengthens our teams and drives innovation. We're committed to an inclusive workplace that values all backgrounds and perspectives, promotes equal opportunity, and builds stronger connections with our people, clients, and communities.

Sustainability

We're committed to sustainability and responsible corporate citizenship. By integrating Environmental, Social, and Governance (ESG) principles across our operations, we minimise environmental impact, support our communities, and drive innovation for a more sustainable future.

Approach

We are agile and collaborative. Our experienced leaders make informed decisions with clarity and efficiency. Supported by extensive internal resources, specialised equipment, and a national network, we mobilise the right support and adapt seamlessly to the changing needs of the work.

THINK CHANGE, THINK BRIGHT

Precision-led design that supports safe execution.

At Bright Group we deliver practical, execution-focused design solutions that support safe, efficient project delivery across the resources and industrial sectors. Our design process ensures every scope is clearly defined, modelled, and planned before mobilisation – setting projects up for success from the outset.

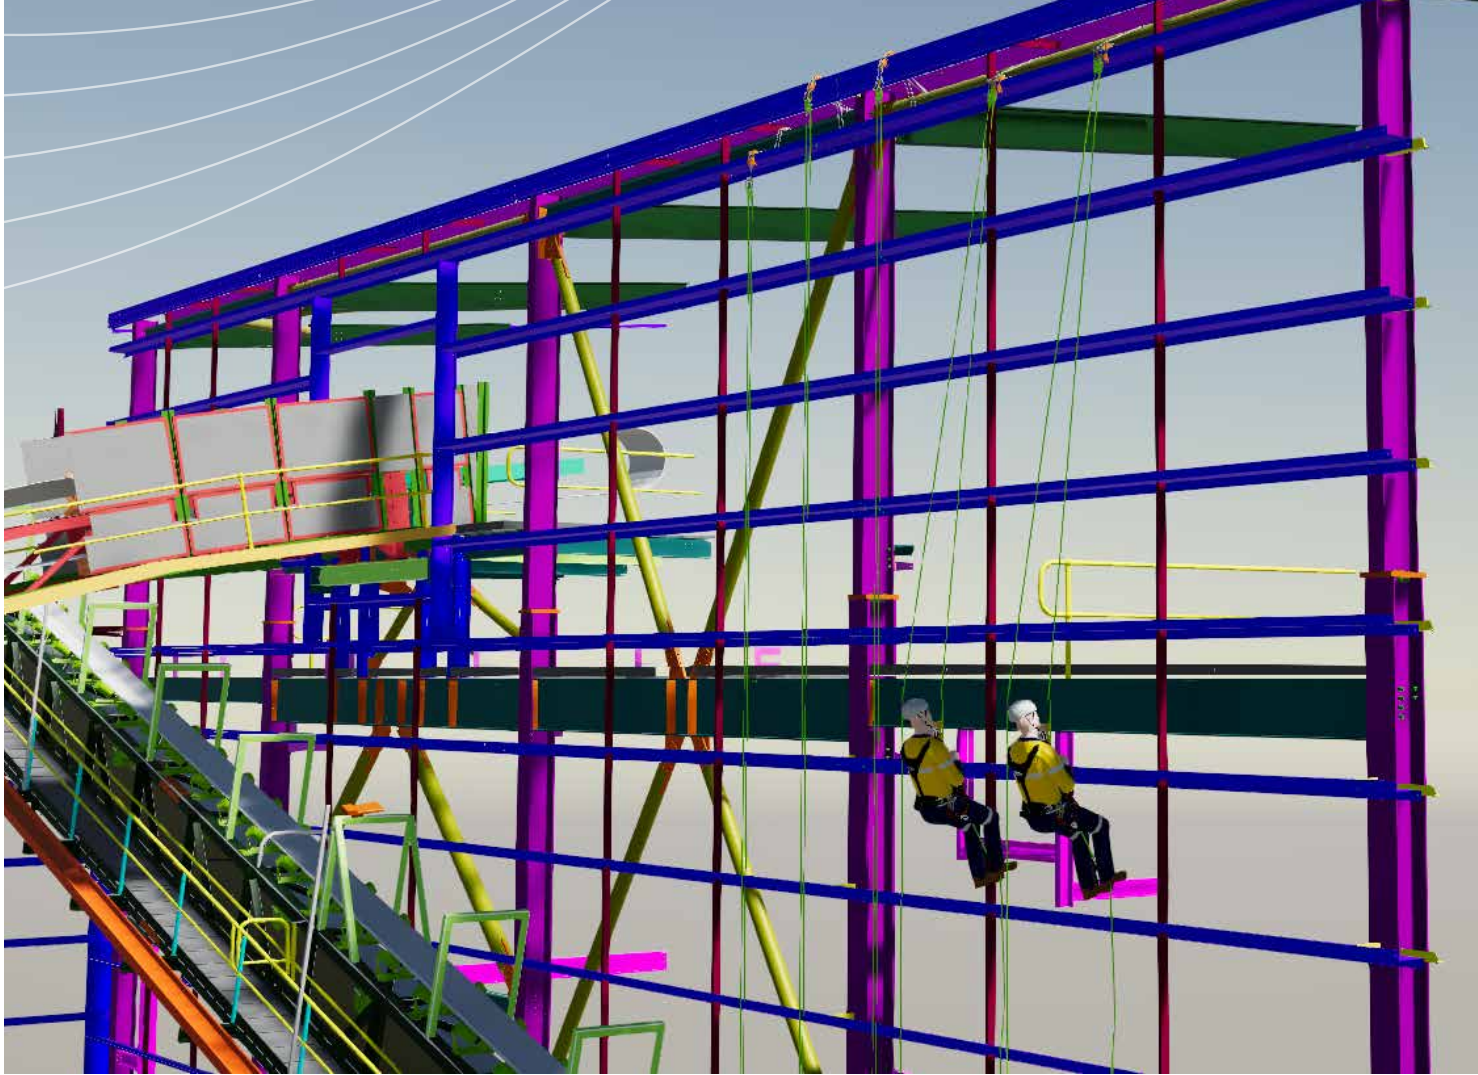

With a strong emphasis on constructability and risk reduction, we develop detailed execution plans and 3D designs that enable site teams to fully understand task requirements before entering live plant environments. This approach improves planning accuracy, enhances safety outcomes, and reduces rework during execution.

Our design capability includes:

- 3D modelling and task visualisation
- Detailed execution and lift planning
- Access and anchor point design
- Equipment, materials, and BOM definition
- Standardised and repeatable design solutions
- Iterative design improvement for recurring tasks

By making designs accessible through scannable QR codes and interactive 3D models, we enhance collaboration between designers, planners, and site teams – bridging the gap between concept and delivery.

Supported by experienced designers and integrated delivery teams, we ensure every design is practical, buildable, and aligned to safe execution in the field.

Standardised Access & Work Pack Design

Controlled, repeatable, and safety-driven execution

At Bright Group we develop standardised work packs and access designs that ensure tasks are executed safely, efficiently, and in full compliance with structural and regulatory requirements. Our pre-approved work packs provide clear specifications, capacities, dimensions, and safety controls – giving execution teams confidence and consistency across projects, maintenance, and shutdown environments. Supported by detailed methodologies, 3D designs, and comprehensive gear and rescue planning, our approach streamlines execution while reducing risk and exposure in the field.

Scaffolding & Rope Access Design Capability

Our scaffolding and rope access design services are underpinned by certified engineering, extensive design libraries, and proven execution methodologies. Special-duty scaffolds can be engineered and certified for fitness-for-purpose, with CAD-based designs incorporating accurate supplier data and clash-free coordination through 3D visualisation platforms. For rope access, our designs enable safe, verifiable, and continuously improving access and rescue outcomes, supported by a large database of standardised configurations and prebuilt components. By combining repeatable design standards with continual improvement, we deliver reliable access solutions that enhance safety, efficiency, and execution certainty from planning through to delivery.

End-to-End Delivery Solutions

We provide fully integrated, end-to-end project delivery solutions across metropolitan, regional, and remote locations.

Our delivery capability spans every project phase, including:

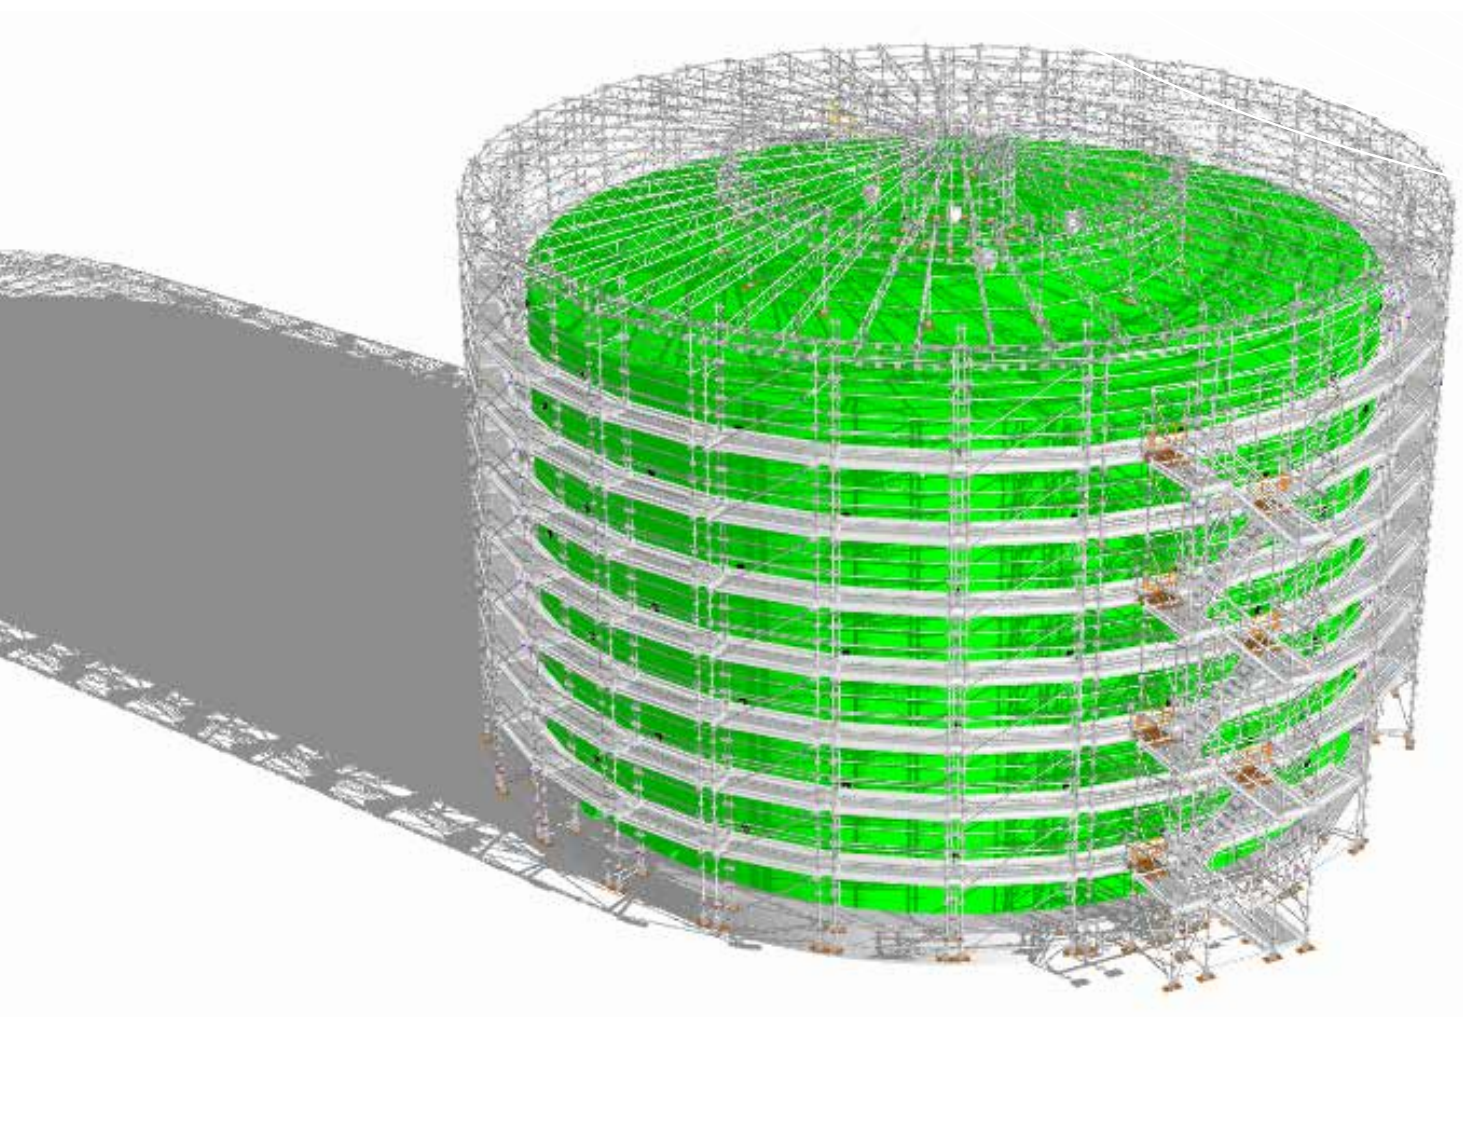

- Front-end design and planning
- Engineering, fabrication, and procurement
- Construction, installation, and commissioning
- Multi-disciplinary coordination and execution
- Project controls, scheduling, and close-out

Our integrated service model enables efficient, safe, and consistent project delivery from concept through to completion. By managing all stages under one roof, we reduce interfaces, optimise resource utilisation, and maintain strong control over quality, safety, and timelines. This approach minimises risk and ensures seamless coordination across all work fronts.

Whether delivering large, complex programs or targeted scopes, we bring the experience, systems, and capability required to deliver projects with confidence and precision.

**Your project. Delivered end to end.
One trusted partner.**
